# TRISOPHIC UNION STRATEGY DRAFT

# Version 2

1. Purpose

The following Strategy Draft constitutes a first approach to provide a general development plan that individual projects can use as a guide. This is to enable the individual steps to be coordinated and organized efficiently.

2. Objectives

The strategy has the following objectives:

- Establishment of the Trisophic Union (TU) as the main trigonocracy-realizer for the USA
- Development and consolidation of TU and increase awareness
- Dissemination of the trigonocratic principles
- Gradual trigonocratization of politics instead of one-time revolutions
- Conviction through utility – people are to be convinced by trigonocratic ideas, not through force or deception, but by their quality

3. Approach

Since top-down planning is neither feasible nor flexible enough due to unforeseen developments, an organic approach will be pursued initially. Furthermore, a hybrid approach strategy will be implemented:

*Scientific sub-strategy:* Development of proof of concepts (PoCs) and publication of papers to ensure scientific integrity and promote members.

*Marketing sub-strategy*: Establishment of a catchy, system-challenging image to disseminate ideas, recruit members, and increase awareness.

4. Challenges

It is important that, regardless of the strategy and its implementation, the TU remains true to its own principles. This means in particular:

- Prevention of corruption
- Anti-democratainment stance
- Primacy of scientific character

## 5. Strategic Roadmap

The strategic roadmap can be divided into four phases, which include several steps.

### 5.1. Phase 1: Organic Development

The aim of the organic development is to gain enough momentum to sustain itself as a movement, and to "get too big to be ignored".

*Recruitment of members:* Focusing on skills is important to support the movement as effectively as possible.

*Development of a constitution:* The development of a loophole-free constitution is important to provide a basis for later stages, thereby providing a first PoC by itself, and consolidating TU's functionality.

*Scientific work:* By analyzing the political situation, providing PoCs, and writing and publishing papers, scientific integrity is to be established. Publications may be submitted to SSRN or ArXiv, for instance. Citation of prominent papers to gain momentum via forward research. Citation of the underlying trigonocracy paper to increase its scientific impact (and triggering interest among experts, which will benefit the TU. Surveys may be conducted in order to provide data for further development, as well as to obtain democratic legitimacy of the trigonocratic aspects. Note that the scientific work is to be realized throughout all phases.

*Defining target audience:* By employing survey outcomes, a target audience may be defined (alternatively, by direct analysis). In either case, communication channels need to be optimized in order to promote TU.

*Offering a benefit:* TU may invite students to do research (on the corresponding topics), so that people get a positive experience and thereby increase scientific information traffic about trigonocracy.

*Spreading the word:* Parallelly to the scientific endeavor, TU must be promoted as a system challenger to benefit from people's motivation to change the current situation. Many of them want changes, but simply do not know how. TU must provide the answers to dwelling questions, canalizing the will to change into sustainable action.

*Preparing for financing options:* See phase 2, financing options.

### 5.2. Phase 2: Consolidation

Here, the strategy might be adapted according to the developments in the previous stage. The aim of the consolidation phase is to strengthen the inner structure of the TU.

*Finalizing the constitution:* In fact, the constitution may be designed that way to be iteratively adopted, but the main structure, or the constitutional backbone, must be finalized in this phase.

*Searching for collabs:* Collaborations with professors or chairs may enable the TU to offer students more research possibilities, underlying TU's scientific role, and promoting its positive image.

*Invitation to discuss:* The provision of forums where members and/or outsiders can exchange views on current topics. This allows the TU to bring itself closer to the people, creating a down-to-earth image. In addition, input from interested parties can be used to accelerate the dissemination of trigonocratic principles and to adapt own strategies and projects to real-life conditions.

*Financing options:* The following financing options can be considered: sale of merchandise; sale of books (e.g., May We Trust); donations (possibly crowdfunding), government support (as an educational institution); algocratic apps for effective governance. Please recall the aspects listed in 4. The financing options may also already be engaged in the previous phase.

### 5.3. Phase 3: Politization

*Benefit from economies of scale:* Both the consolidation and the aimed bigger size of the movement should increase TU's effectiveness and efficiency. These advantages must be exploited.

*Realization of political projects:* Scientific integrity and reputation should be used to found an independent party or to indirectly implement trigonocratic aspects in politics. Hereby, the reforms are to be implemented to follow the gradual trigonocratization objective, including *in situ* adjustments to given circumstances.

*Establishing a political force:* The trigonocratic movement is to be established as a new political way, constituting a novel political direction.

### 5.4. Phase 4: Expansion

This phase is to be engaged concomitantly with the other phases.

*Seed planting:* Through PoCs and social media, people around the world will inevitably become aware of the TU and trigonocratic ideas. This should sow seeds that can later serve as offshoots or similar movements.

*Coordination of individual movements:* Once the TU is consolidated and strong enough, any groups with similar aims must be supported (organizational, financial) and coordinated worldwide. In particular, weak signals (dissatisfaction, corruption, willingness to change in politics) must be taken into account.
